World Cup Victory L&T-ites have a Special Reason to Cheer

Amid all the triumph and joy of India winning the World Cup, L&T-ites have a special reason to cheer. For two of L&T's businesses – Construction and Electrical & Automation – played a part in setting up the venue for the historic final.

L&T Construction was involved in extensive refurbishing and renovation of Wankhede stadium. The contract involved refurbishing the stadium to bring it up to standards approved by the International Cricket Council. If spectators had a much better viewing experience all through the match, it is thanks to the design and construction expertise of L&T's team.

All the electrical systems that powered the stadium came from L&T Electrical & Automation. Products supplied included Vacuum Circuit Breakers, U Power Air Circuit Breakers and the DSine Moulded Case Circuit Breakers. In fact, a small switchgear team comprising engineers from 'Post Sales Support' and from 'Design' was on duty at the stadium right through the match.

As we all know, the stadium came in for high praise, and all the systems worked perfectly to provide a fitting setting for a match that will remain etched in every Indian's memory.
