

Case Study HSE Induction Film

HSE Induction training is provided by the EHS team to the visitors, clients and new employees visiting the site.

Challenge

The aim was to provide same level of training to every employee in the company.

Intervention

Effective communication of all safety requirements was our key priority. Considering the resource and time-consuming nature of human-led safety training, an HSE Induction Script was prepared and discussed with a vendor to understand how these requirements can be visually depicted in a film. This will communicate all the necessary information in an engaging and memorable way. The team developed a 22-minute safety training video on 10 themes in five languages, and screened them via audio-video platform to make people aware of possible hazards at sites.

Output

- Improvement in Healthy & Safety, Operational Excellence, New EHS Benchmark and Digitalisation program resulting in cost savings.
- A shorter, 9-minute long film that was developed, helped staff to learn more in a shorter period of time.
- The film was appreciated by the clients and senior management leads.
- Videos proved an effective way of communication of safety requirements to the visitors.

HSE Digital Induction Training Program

Case Study Installation of LED TV for Improving Communication

At MFF Hazira, a need was felt to improve the visual management and communication among the large number of workmen, provide appropriate information on health and safety management, and identify potential hazards.

Challenge

Effective communication around HSE was a major challenge. To address it, we installed LED television sets at Hazira.

Intervention

ILED Video Walls were installed for effective communication on HSE and develop Visual HSE Management. Further, LED TV sets were installed across the three yards with the help of IT & Maintenance team.

Output

- LED screen displays helped share important messages related to HSE.
- Top Management could deliver important instructions through video walls.
- New initiatives on safety were communicated to the workforce.
- HSE, production and quality statistics were displayed on the LED screens.
- Appreciating contractors for their work through the displays boosted morale.

HSE training via LED Video Walls
