L&T Hydrocarbon Engineering (LTHE) has been ranked as the 'Top EPC Contractor in the Middle East' by *Oil & Gas Middle East* magazine, the region's leading publication focused on the upstream oil and gas industry.

The magazine's editors credited LTHE's top finish to a steady stream of projects out of Saudi Arabia and improved financial performance for FY 19-20, despite strong headwinds and difficulties faced by the clients. Anticipating uncertainties owing to the pandemic, the Company worked closely with its clients to manage delays better than other contractors in the global energy market.

The publication also alluded to LTHE's proactive measures and exemplary discipline in tackling the Covid crisis across its project sites and offices. Thanks to its well-thought-out plans and timely interventions, work has continued without adverse impact on project timelines.

Some of LTHE's key projects in the Middle East include Saudi Aramco's Hasbah II Gas Increment Project, Marjan Increment Program Package 2, n-Paraffin & Derivative Complex for Farabi Petrochemical Company at Yanbu, and Al Dhafra Petroleum's Haliba Development Project in the UAE.
